# Top Intersections 2016: Introduction and Methodology

The Top Traffic Intersections report is a biennial publication produced by the Metropolitan Area Planning Agency (MAPA) as part of its ongoing transportation planning process. The report is produced in conjunction with the *Traffic Flow Map*, the *Traffic Growth Report* and the *Top Traffic Interchanges Report*. The top traffic intersections listed in this publication are based on data compiled by MAPA in cooperation with local, state and federal agencies.<sup>1</sup> This data represents actual or derived Annual Average Weekday Traffic (AAWT) for the Omaha–Council Bluffs metropolitan area.

This report is for *intersections* only and, therefore, does not include information for *interchanges*. To qualify as an intersection there must be an at-grade, or same level crossing. Locations such as 72<sup>nd</sup> and “L” Street, Saddle Creek Road and Dodge Street, and 72<sup>nd</sup> Street and West Center Road that do not have an at-grade crossing are considered interchanges and are excluded from this report. Similarly, if one of the crossings contains a median, such as W. Dodge Road 96<sup>th</sup> St., it is not considered an intersection. For information regarding interchanges please consult the MAPA Top Interchanges report.

In past years, separate sub-reports were created for Bellevue, Council Bluffs, and Sarpy County. This report aggregates and ranks intersections within each county (Douglas, Sarpy, and Pottawattamie) and provides a regional ranking as well.

The intersections in the report have been ranked based on total intersection volumes. The rankings present the AADT for each intersection leg as well as the intersection total. These numbers are listed in hundreds of vehicles (*i.e.*, “831” signifies 83,100). Intersection totals are calculated by totaling the traffic counts from each leg of the intersection and dividing by two, which captures the total number of vehicles passing through an intersection.

The maps on pages 4–12 graphically represent the intersection rankings. While most rankings appear on these maps, some may not be shown due to overlapping of numbers or being outside the mapped areas. However, the maps in this section denote the locations of the Top 500 intersections in the region which corresponds to the regional tables beginning on page 23. An alphabetical index of all intersections follows the rankings at the end of the report.

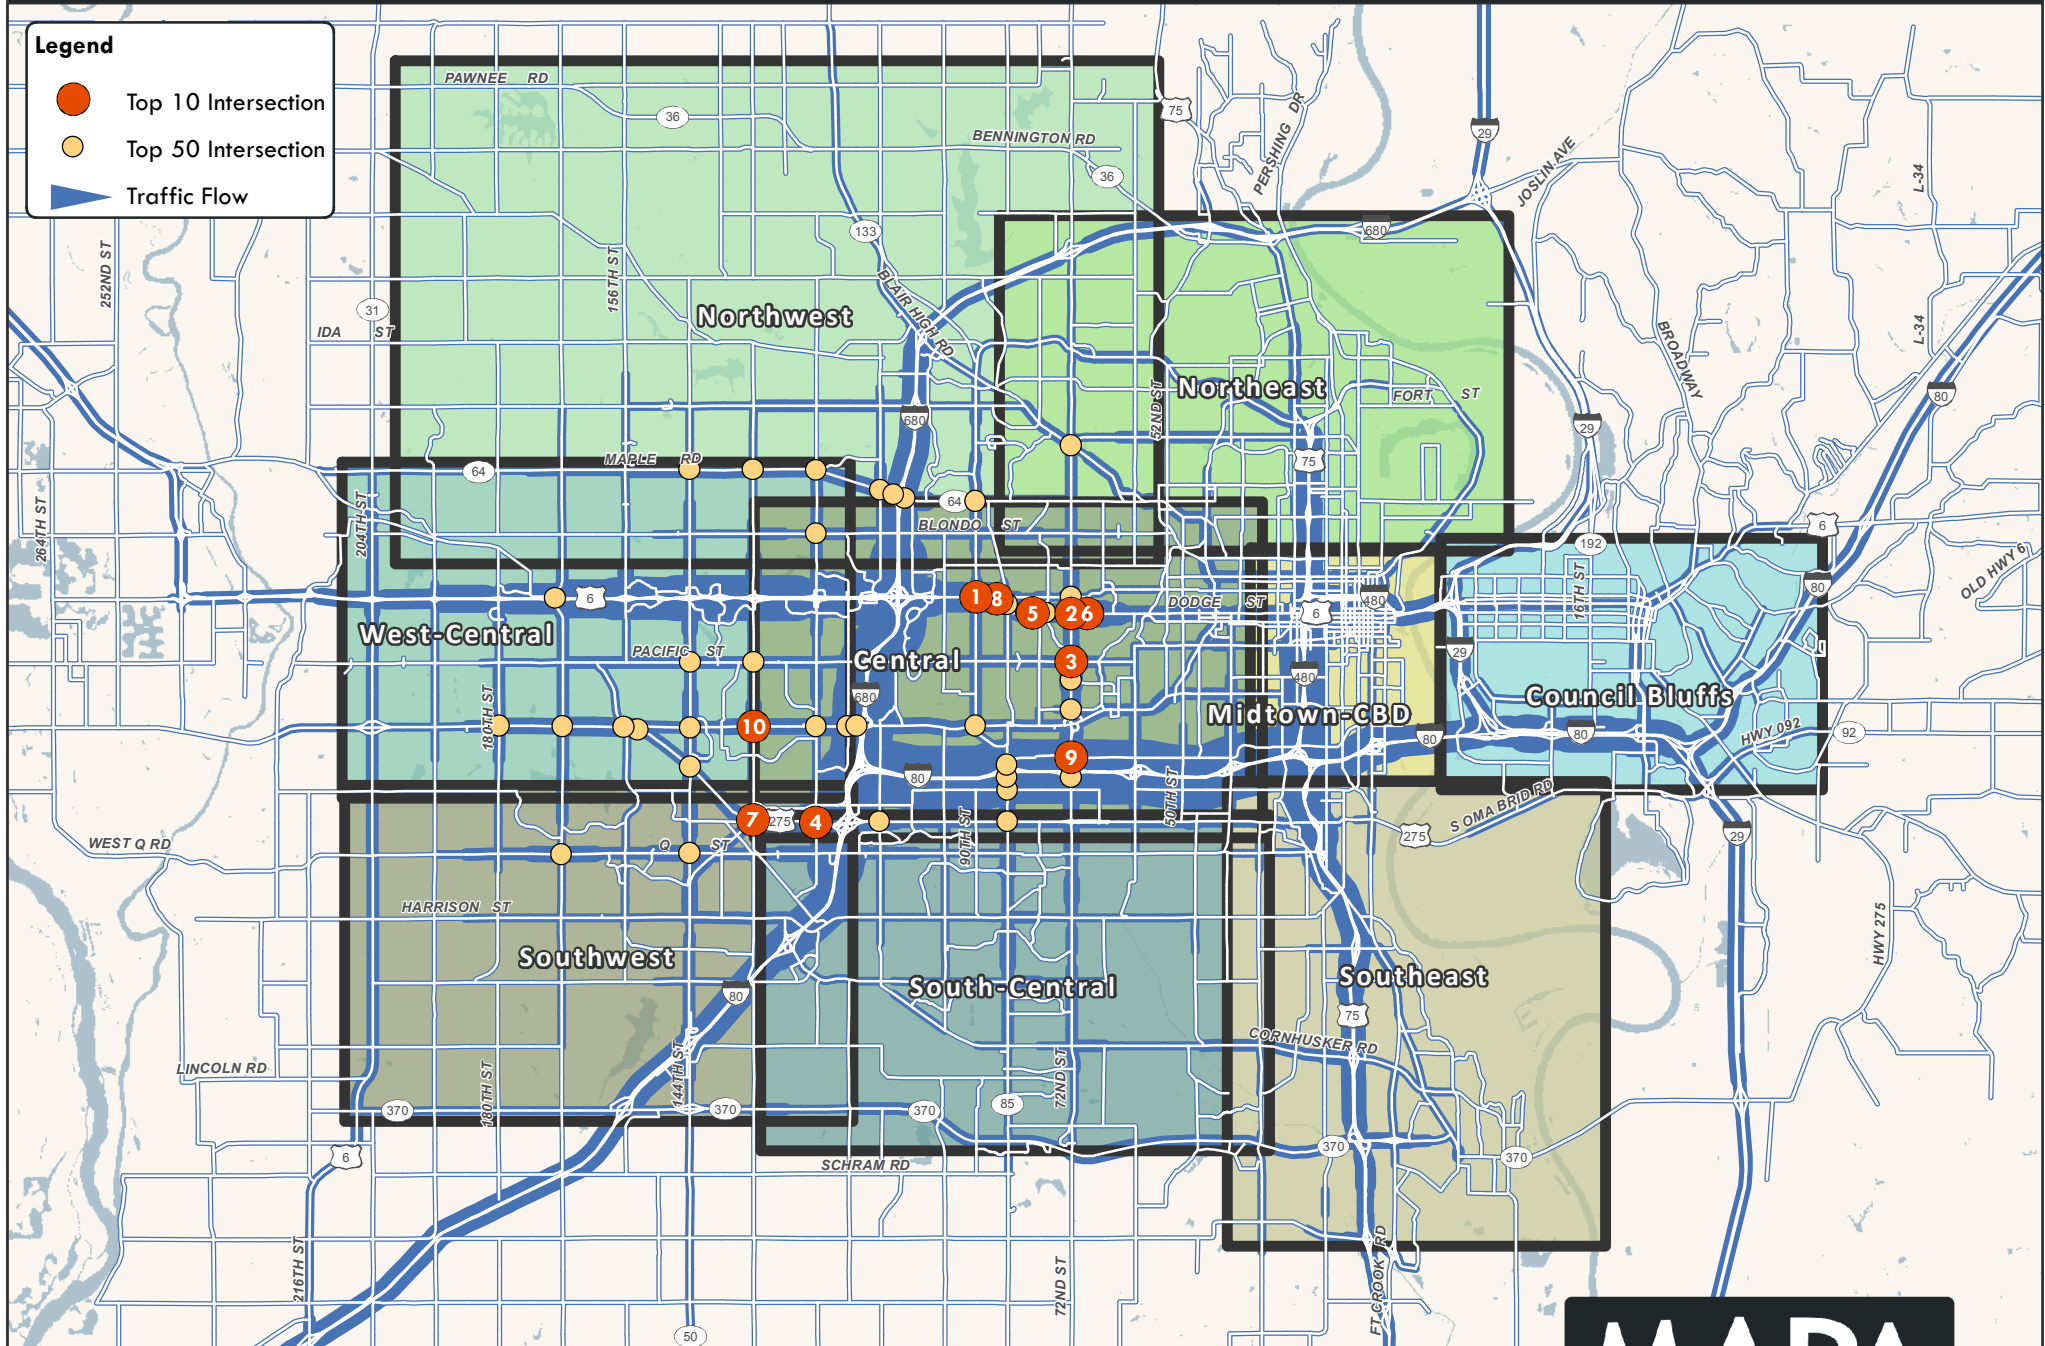

The intersection of 90<sup>th</sup> Street and West Dodge Road was the busiest intersection in the 2016 report as it was in 2012 and 2014. The Dodge and L Street Corridors once again show the highest volumes in the metro area, with 8 of the top 10 intersections are located along Dodge or L St. /Industrial Rd.

---

<sup>1</sup> Cities of Bellevue, Council Bluffs, La Vista, Omaha, Papillion; Counties of Douglas, Pottawattamie, Sarpy; Iowa DOT, Nebraska DOR.
