Introduction

The *Top Traffic Intersections Report* is a biennial publication produced by the Metropolitan Area Planning Agency (MAPA) as part of its ongoing transportation planning process. The report is produced in conjunction with the *Traffic Flow Map*, the *Regional Traffic Patterns Report* and the *Top Traffic Interchanges Report*. The top traffic intersections listed in this publication are based on data compiled by MAPA in cooperation with local, state and federal agencies.

This data in this report is represented in Annual Average Daily Traffic (AADT) for the Omaha-Council Bluffs metropolitan area from 2018 - 2020. Traffic volume estimates include new counts collected during the reporting period and older data that is factored and interpolated. This report aggregates and ranks intersections within each county (Douglas, Sarpy, and Pottawattamie) and provides a regional ranking as well.

Methodology

This report is for intersections only and, therefore, does not include information for interchanges. To qualify as an intersection there must be an at-grade, or same level crossing. Locations such as 72nd & "L" Street, Saddle Creek Road & Dodge Street, and 72nd Street & West Center Road do not have an at-grade crossing and are considered interchanges. These locations and others with similar configurations are excluded from this report. For information regarding interchanges please consult the MAPA *Top Traffic Interchanges Report*.

The intersections in the report have been ranked based on total intersection volumes. The rankings present the AADT for each intersection leg as well as the intersection total. Intersection totals are calculated by adding the bi-directional traffic counts from each leg of the intersection and dividing by two, which captures the total number of vehicles passing through an intersection.

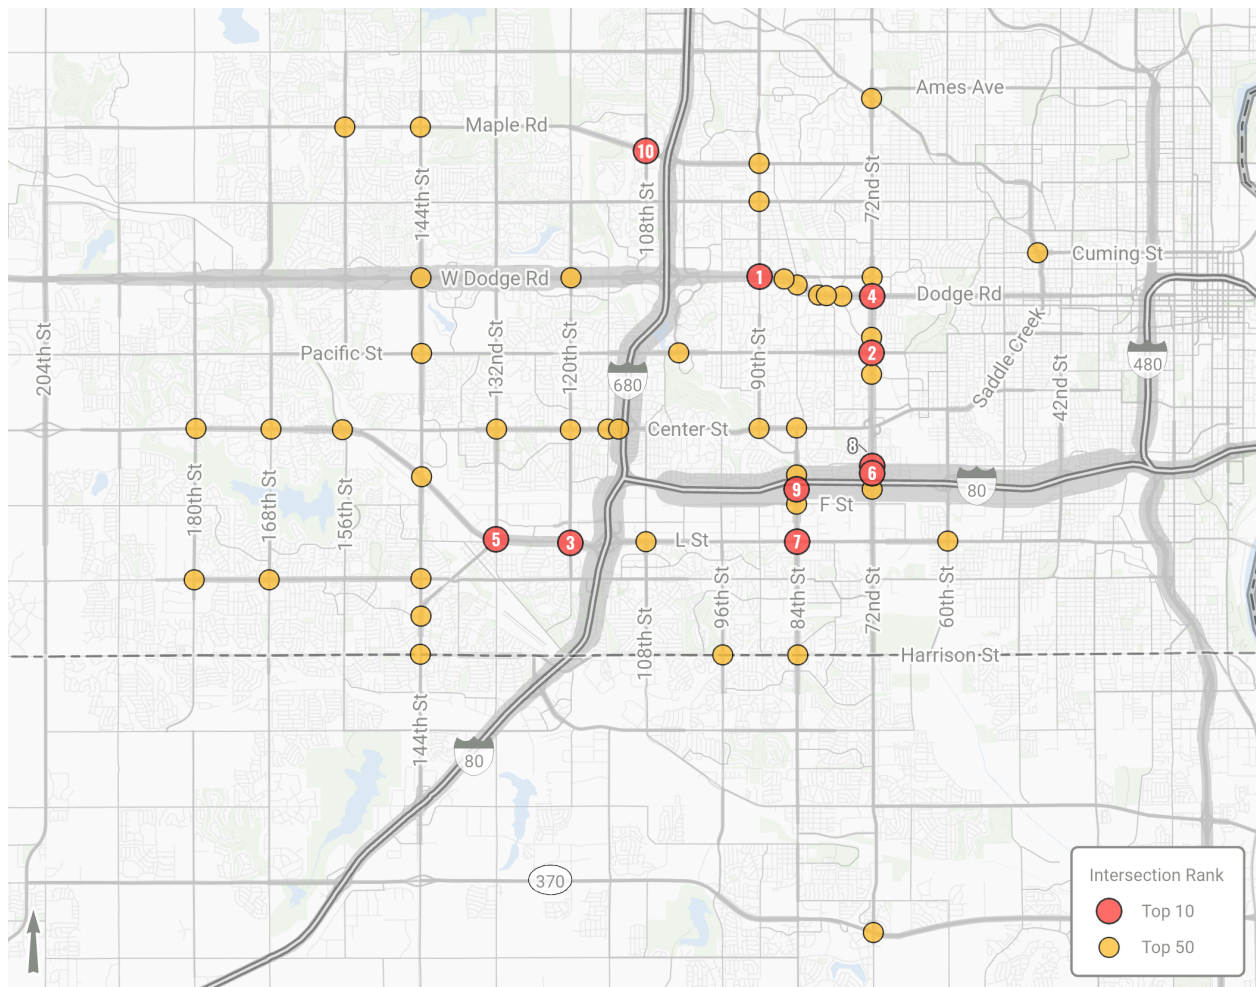

Intersection Rankings

Intersections within the City of Omaha have higher traffic volumes compared to those elsewhere in the region. All of the top 50 regional intersections, excluding 72nd & Hwy 370, are contained within or shared by the boundary of the City of Omaha.

The intersection of 90th Street & West Dodge Road remains the busiest in the region. The connection between 90th & West Dodge Road continuing south and east to 72nd & Pacific Street shares a considerable amount of traffic. At Interstate 80 the 72nd Street and 84th Street ramps are the highest volume connections to the interstate. The “L” Street corridor west of 120th Street also maintains some of the highest traffic flows regionally.

A detailed map of the Top 50 intersections is depicted in Figure 1.

Figure 1: Top 50 Intersections

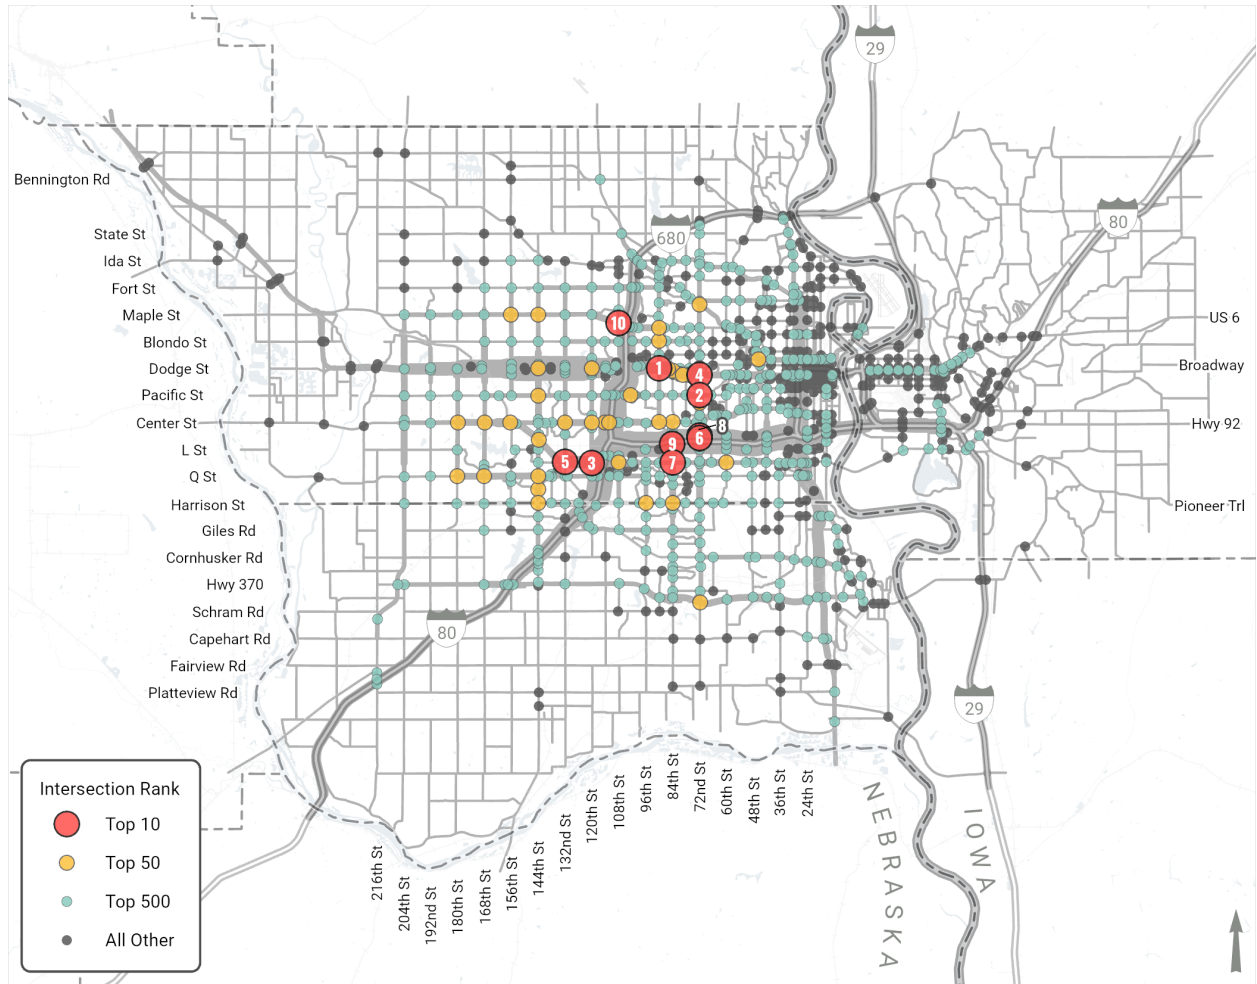

In Sarpy County, 84th Street & Harrison Street is the highest ranking intersection. Along Harrison Street and Highway 370 traffic volumes are generally the highest.

In Pottawattamie County, the South Expressway & Interstate 80 ramps have the highest traffic volume, followed by intersections along Broadway and Kanesville Boulevard.

Regional intersection activity is depicted in Figure 2.

Figure 2: Regional Intersection Rank

Included in the tables below are rankings for intersection Average Annual Daily Traffic (AADT) by county. The data includes any intersection within the top 500 traffic volumes regionally.

Douglas County

Table 1: Douglas County Intersection Rank
